

NEW CONTRACTOR PORTAL IS LIVE ON CHAMPLAIN HUDSON POWER EXPRESS WEB SITE

May 14, 2013, Albany, N.Y. -- Transmission Developers Inc. (TDI) announced today that the company has launched a new section on the Champlain Hudson Power Express (CHPE) [web site](#) that will allow companies interested in doing business with the CHPE Project to submit information.

The new contractor portal will allow businesses to submit information to TDI so the company has a database of vendors that can be called on as the CHPE Project moves forward. Companies interested in providing products or services to TDI should visit [the contractor portal](#) and provide contact information and what types of services are being offered.

TDI is committed to partnering with the suppliers and subcontractors that best fit the needs of the CHPE, which will bring 1,000 MW of clean, renewable energy to New York. It is estimated that construction will begin in 2014 at the conclusion of the permitting process. While under construction, the Champlain Hudson Power Express is expected to create an average of 300 jobs during the approximately four-year construction period.
