**Champlain Hudson Power Express ("CHPE")
Environmental Management & Construction Plan
Notice of Major Change**

Project: Champlain Hudson Power Express

Segment: 9

Notice Number: 123

PSC Case: 10-T-0139

USACE Permit Number: NAN-2009-01089-M12

Location (Milepost, Town/County): Selkirk Preferred MP 3.80 to Selkirk Preferred MP 4.40, Town of Bethlehem, Albany County, NY

Drawing References: Segment 9 (Package 5B) EM&CP Appendix C: Sheets C-114, C-115, C-116, C-309, C-310, C-311, C-312, C-313, C-314, C-407, C-408

Other Documents/References: Segment 9 (Package 5B) Appendix O, T

Component(s) Impacted by Change: Segment 9 (Package 5B) EM&CP Appendix C: Sheets C-114, C-115, C-116, C-309, C-310, C-311, C-312, C-313, C-314, C-407, C-408, Appendix E, Appendix J

Description of Change:

This major change is to incorporate an adjustment to Segment 9 (Package 5B) HDD 89 to avoid crossing an existing overhead National Grid sub-transmission line between STA 51200+00 to STA 51220+20. The adjustment to HDD 89 includes extending of the HDD 89 workspace in front of the entry pits along with adjusting the limit of work (LOW) and associated permanent easement (Lands N/F of Linda J. Kasinski TM# 132.00-2-25.2).

This change includes an increase in tree clearing of approximately 0.25 acres in an environmentally sensitive area (ESA 4). This change lies on a historic property (Bullock Tenant Farmhouse), which has been determined by SHPO to be eligible for the National Register of Historic Places. The temporary access road and subsurface impacts (HDD, trench and splice boxes) will have no adverse effects on the property, as confirmed by SHPO on March 25, 2024. Please see the attached reviewer supplement form for full list of changes.

Pursuant to Condition 158(b), this change does not require referral to the Commission based on a substantial increase in environmental impacts, nor does it relate to contested issues decided during the proceeding. This change involves shifting a small portion of the alignment outside of the deviation zone (approximately 1,100 feet in length [all HDD], extending to a maximum distance outside the deviation zone of 22 feet), and is submitted as a change to the approved EM&CP and Facility route under Certificate Condition 158. The anticipated ADZ exceedance constitutes a major change.

This change results in a decrease of 137 SF of Permanent ROW Impacts, a decrease of 7 SF of Temporary Construction ROW Impacts, and an increase of 3,615 SF of Temporary Construction Impacts to Wetland FA. See below for changes to the Segment 9 EM&CP Table 9-2 reflecting the updated wetland impacts. Aside from the rows listed below, there are no additional changes to Segment 9 EM&CP Tables 9-1 and 9-2 included with the change notice.

CHANGES TO EM&CP TABLE 9-2 (WETLAND IMPACTS):

Wetland ID	Wetland Community Type	Drawing Station (Appendix C)	Jurisdiction	Permanent ROW Impacts (SF)	Temporary ROW Impacts (SF)	Temporary Construction Impacts (SF)
FA	PEM	51191+00	USACE	-	2,366	46,551
FA	PFO	51191+00	USACE	7,740	-	95,176
FA	PSS	51191+00	USACE	-	7,375	80,288

The Deviation Zone Excursion Table 1 of EM&CP "Appendix E Justification for Deviation Zone Excursions in Segment 8" is revised below:

Excursion	Parcel ID	Location (Approximate – see Drawings for Details)				Justification for Revision	Environmental Impact Reviewed
		Sheet	Mile Point	Station Start	Station End		
S9-3	132.00-2-25.2	C-114 to C-116	Selkirk Preferred MP 3.80 to 4.40	51204+00	51215+00	Conflicts with National Grid OH Transmission Line	Cultural Resources; ESA 4; Wetlands; Terrestrial Ecology

Excursion

1. Description of the Excursion

Excursion S9-3 is located within the Town of Bethlehem beginning approximately 0.8 miles north of Bridge Street (Rt. 396) crossing under CSX tracks (approximately STA 51204+00 to 51215+00). See Sheet C-114 and C-115 attached..

2. Justification

National Grid required revisions to the alignment and HDD design along their transmission corridor to increase clearances to their permanent assets. Given the constraints at or near the CSX tracks in conjunction with the National Grid transmission clearance requirements, this ADZ Excursion is the minimum necessary to feasibly achieve installation.

3. Environmental Impact

The anticipated ADZ exceedance constitutes a major change as it is 22 feet perpendicular to the ADZ at its furthest point; environmental impacts will be reduced as noted above, and the overall character of the Facility will not be changed. A detailed impact review and summary of environmental considerations are provided below for the 1,100' of HDD.

Recreation: None present within the vicinity of the excursion based on desktop aerial imagery and field confirmation.

Agricultural Resources: None present within the vicinity of the excursion based on desktop aerial imagery and field confirmation.

Cultural Resources: Hartgen Associates performed a review of the Segment 9 alignment and identified areas where the Facility may impact cultural resources (see Table 11-1 of the EM&CP and Appendix O – Cultural Resources

Management Plan). Hartgen Associates has recommended testing or monitoring in this area during construction to avoid impacts to cultural resources.

Terrestrial Ecology: Excursion S9-3 occurs along the CSX ROW. Tree clearing expected for this work outside the ADZ is anticipated to be similar as what would be required should the placement of the conduit be maintained in the ADZ. Clearing will be selective and only remove what is required for the construction of the Facility and will be performed as described in the EM&CP. The area will be restored as described in Section 14 of the EM&CP.

Threatened and Endangered Species: The change involves a net increase of 0.25 acres of tree clearing in ESA 4. The Contractor will follow the avoidance and minimization efforts outlined in the approved EM&CP and protocol approved by NYSDEC and USFWS.

Wetlands and Streams: This excursion is within wetland FA. This wetland was delineated within the Project Corridor and extends outside of the ADZ. An equal amount of wetland would be impacted by the permanent placement of infrastructure even if the conduit remained within the ADZ. The area will be restored as described in Section 14 of the EM&CP. Therefore, the proposed ADZ Excursion does not significantly increase impacts to wetlands or streams as compared with the approved ADZ.

4. New Landowners Affected

There are no new landowners affected by this change. Moreover, CHPE does not need to obtain additional property rights to implement the requested change.

CC Requirements for Modifying an EMCP

#	Certificate Condition	Description of the Proposed change
158	The EM&CP approved by the Commission may incorporate modifications from the EM&CP proposed by the Certificate Holders. No change to the approved EM&CP may thereafter be made except in accordance with the following procedures:	
158(a)	For a proposed change that: (i) would involve a site listed or eligible for listing on the New York State or National Register of Historic Places, the Certificate Holders shall give at least two (2) weeks prior notice to the Field Service Bureau of OPRHP. (ii) would involve any State-regulated wetland or protected stream or water body, the Certificate Holders shall give at least two weeks prior notice to NYSDEC, and, if within the Adirondack Park, to APA. (iii) would affect the occupied habitat of a TE species, the Certificate Holders shall give at least two weeks prior notice to NYSDEC and to the USFWS or NMFS (where applicable) prior to providing notice to DPS staff of the proposed change. (iv) would affect the individual or habitat supporting RTE plants, the Certificate Holders shall give at least two (2) weeks prior notice to NYSDEC and DPS. (v) would involve agricultural land, the Certificate Holders shall give at least two (2) weeks prior notice to Ag & Mkts. (vi) would involve the herbicides planned for use (including mixed proportions, additives or method of application), the Certificate Holders shall give at least thirty (30) days	<p>(i) This change does involve a site listed in the NYS or National Register of Historic Places. However, there will be no adverse effects on the property, as confirmed by SHPO on March 25, 2024.</p> <p>(ii) This change results in an increased impact to federal wetlands. This change does not result in an increased impacts to State-regulated wetland or waterbody and is not located in the Adirondack Park.</p> <p>(iii) This change affects an occupied habitat of a TE species.</p> <p>(iv) This change does not affect individual species or habitat supporting RTE plants.</p> <p>(v) The change does not involve Agricultural Land.</p> <p>(vi) There are no changes in herbicide use as result of the requested revision.</p>

	prior notice to NYSDEC. (vii) would affect land or water owned or controlled by CNY, the Certificate Holders shall give at least two (2) weeks prior notice to CNY.	(vii) The change is not on land owned or occupied by New York City.
158(b)	The Certificate Holders shall report any proposed changes to the EM&CP to DPS Staff. DPS Staff will refer to the Commission for approval any proposed changes that cause a substantial increase in environmental impact, after consultation with NYSDEC, any proposed changes that relate to contested issues decided during the proceeding, and any proposed changes affecting State highways (but need not do so if the report indicates NYSDOT's agreement to such proposed changes). DPS Staff is authorized to approve all other proposed changes, in accordance with the procedure outlined herein, and will submit reports of such changes to the Secretary or the Secretary's designee, which reports will be posted on the Commission's website under this case number.	See description above.
158(c)	Upon being advised that DPS Staff will refer a proposed change to the Commission, the Certificate Holders shall notify all active parties that have requested to be so notified, as well as property owners or lessees whose property is affected by the proposed change. The notice shall: (i) describe the original conditions and the requested change; (ii) provide documents supporting the request; and (iii) state that persons may comment by writing to the Commission within twenty-one (21) days of the notification date.	N/A
158(d)	The Certificate Holders shall not execute any proposed change until they receive written approval from the Commission (if Commission approval is required pursuant to subparagraph (a) of this paragraph) or oral or written approval from DPS Staff (in the case of a change that Staff has authority to approve) except in emergency situations threatening personal injury, property damage, or severe adverse environmental impact, or as specified in the EM&CP. When the Certificate Holders have obtained oral approval from DPS Staff for a change, DPS Staff will confirm such approval in writing within ten (10) business days.	CHPE anticipates receiving oral or written approval from DPS staff.

Proposed Change Involves New/Additional Impacts to:

- Site listed or eligible for listing on the New York State or National Register of Historic Places [CC 158(a)(i)]
- State-regulated wetland or protected stream or water body [CC 158(a)(ii)]
- Occupied habitat of a TE species [CC 158(a)(iii)]
- Individual or habitat supporting RTE plants [CC 158(a)(iv)]
- Agricultural land [CC 158(a)(v)]
- Herbicides planned for use (including mixed proportions, additives or method of application) [CC 158(a)(vi)]
- Land or water owned or controlled by CNY [CC 158(a)(vii)]
- Federally regulated wetland or protected stream or water body [Requires Transmittal to ACOE]

Attention: Jason Neff, PE, PMP - Design Engineering Manager

Subject: HDD 89 Design Revisions
Champlain Hudson Power Express – Segment 5b
Rotterdam to Fuera Bush, NY

Dear Mr. Neff:

At your request, we have modified HDD 89 to accommodate minor alignment modification and duct material changes. Specifically, these modifications include reversal of the drilling direction, and shifting of the pits. In addition, the duct will be fusible PVC rather than HDPE. Amended design calculations are attached.

The discussions and recommendations contained in our HDD Basis of Design Report and IRR plan otherwise remain unchanged.

We thank you for this opportunity to be of service to you and your team on this project. Should you have any questions or require additional information, please do not hesitate to contact the undersigned at your convenience.

Sincerely,

Brierley Associates Underground Engineers, PLLC

ENTRY	21,358 lb	1642 psi	OK	8,136 lb	625 psi	OK

Maximum applied pull Stress, σ_T = 1642 psi OK Max. = 645 psi OK
 Unballasted Stress = OK Ballasted Stress = OK

Maximum tensile stress during pullback = σ_i = (F_T/πt_m(D_{OD}-t_m))+E_TD_{OD}/2R PPI Ch 12 Eq 16

Calculated Material Design Limits For Designed Drill Path

Ultimate Pull Strength, UPS = 90,676 lb	UPS = σ _U πD _{OD} ² ((1/DR)-(1/DR ²)) σ _U = 7,000 psi
UniBel Safe Pull Strength @ FS = 2.5	36,270 lb SPS = UPS/FS σ _A = 2,800 psi
ASSESS Pull Restricted Buckling Capacity, P _{PA} > ΔP invert	
Allowable Short Term Unconstrained Buckling, P _A = 86.74 psi	P _A = (2E _T /(1-μ ²))(1/(DR-1)) ² (f _o /N)
Pull Stress Reduction, F _R = 0.9392013	F _R = (5.57-(r+1.09) ²) ^{1/3} -1.09
r = 0.1151	r = σ _T /2SPS
Allowable Unconstrained Buckling Capacity, P_{PA} = P_AF_R = 81.471	
ΔP _B unballasted = (H _F -El _m)*γ _{DF} = 24.1 psi	ACCEPT
ΔP _B ballasted = H _F *γ _{DF} -H _W *γ _B = 4.8 psi	ACCEPT

Drill Hole Diameter Assumed for Calculations

D_H = 14.0 in D_O<8" Use D_H=D_O+4"; 8"<D_O<24" Use D_H=1.5*D_O; D_O>24" Use D_H=D_O+12"

Calculated Pipe and Fluid Properties

OD Perimeter Length, P	27.1 in2/LF
Wall Section Area, A _w	18.81 in^2
Volume Outside, V _{DO}	0.532 cf/LF
Volume Inside, V _{DI}	0.401 cf/LF
Drag Coefficient, q _d	1.63 lb/ft

Calculated Effective Weights (Buoyant Forces)

	Pipe	Air Filled	Ballasted
On Ground, w _a /w _{af}		8.56 Lb/LF	33.61 Lb/LF
In Hole with Drill Fluid, w _b /w _{bf}		-32.92 Lb/LF	-7.88 Lb/LF

NOTES: 1 - Calculations were done in general accordance with ASTM F-1962 as modified to account for invert tangent section, independent vertical curves, and fluid drag. ASTM applies hydrokinetic pressure as shear per unit pipe length requiring a back calculation to determine actual pull force based on average pipe area.

Pump Rate during Pull	200 gpm
DH Volume	1.07 cf/LF
Open Hole Velocity	25.01 ft/min
Annular Velocity	49.78 ft/min

TABLE 3 - PULL ASSESSMENT
ANTICIPATED PULLING FORCE - PVC PULL
HDD 89 Circuit #2
Wetlands Crossing

Revision 1

TBD

- Notes:**
1. Geology is interpreted from project data
 2. Rod length: 20 feet
 3. The error bars are at 20% and represent Drill Fluid low and high density range.
 4. Ground surface data obtained from project survey data
 5. Subsurface data from Geotechnical Report.

Basis of annular pressure calculations

9.00 in	Pilot Hole Diameter
78.0 pcf	Unit Weight Drill Fluid
200 gal/min	Pump Rate
3.50 in	Drill Rod Diameter
20	Ft per rod
20%	for APC curve
